Attachments: Seedlist_2013.doc (206KB)

Please find attached the 2013 Meconopsis Group seed list for your consideration.

As you will see, seed of some Meconopsis species may be ordered in advance for an Autumn 2014 sowing, assuming that these species will be available.

This process will replace the Early Seed distribution of *M. delavayi*, *M. punicea* and *M. quintuplinervia* which took place this year for those members who could be contacted by e-mail.

Members may request *M. punicea* for both delivery dates so that they can establish colonies which will flower in alternate years, but distribution priority will be given to members who do not use e-mail and could not order seed for the autumn sowing.

Once again I will ask for progress of germination in late spring. In addition, please tell me if any of the 2012 Meconopsis seed appears to be mis-identified. Hopefully this will not be the case, but we need due diligence as a specialist plant group.

Kindest regards,

Ian D. Scott
Seed Exchange Manager
